

Site background

How to change the colour or pattern of the background

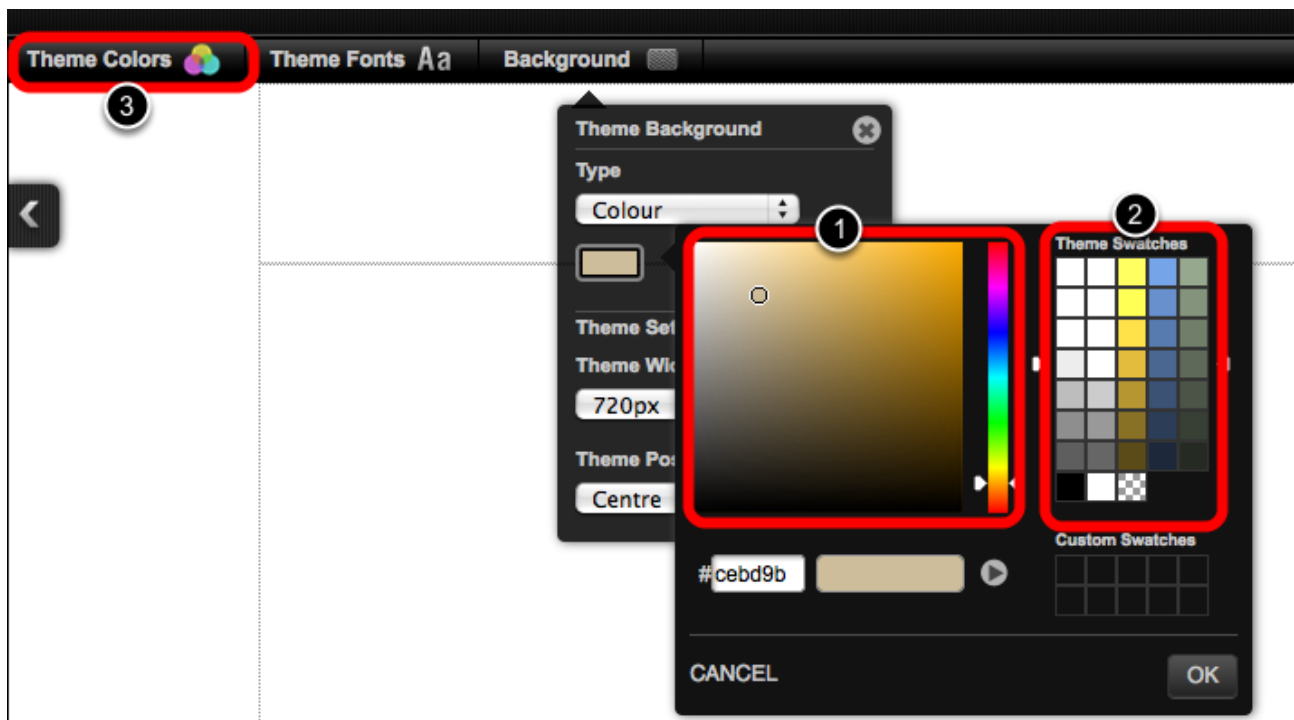

Set the background colour

Changes to the background apply to the entire theme. You can not set the background of an individual page.

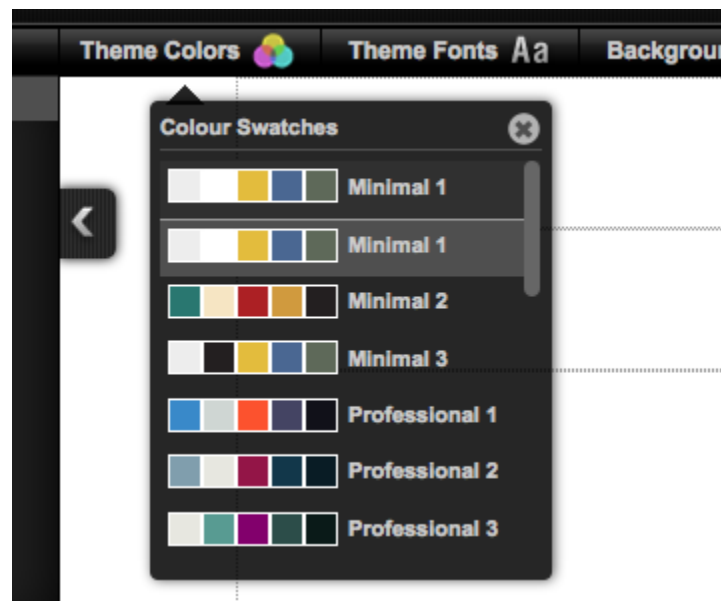

To set the background colour, click the background icon (1) and set the type menu to **colour (2)**.

Click on the **colour chip (3)** select a colour

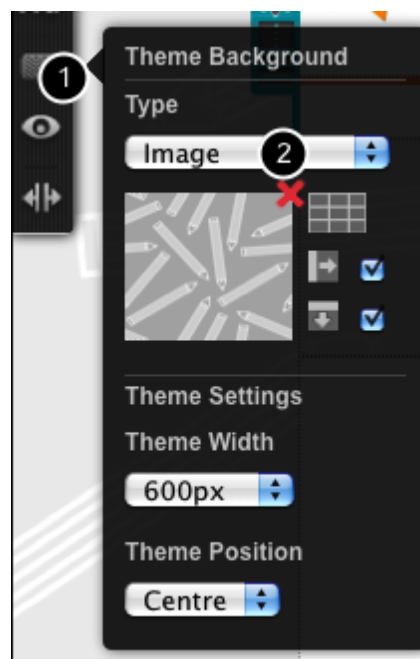

If you select a colour from the **colour picker (1)** the colour will stay fixed. If you select a colour from the **theme swatches (2)** the colour will change whenever you change the **colour swatch (3)**

Colour swatches

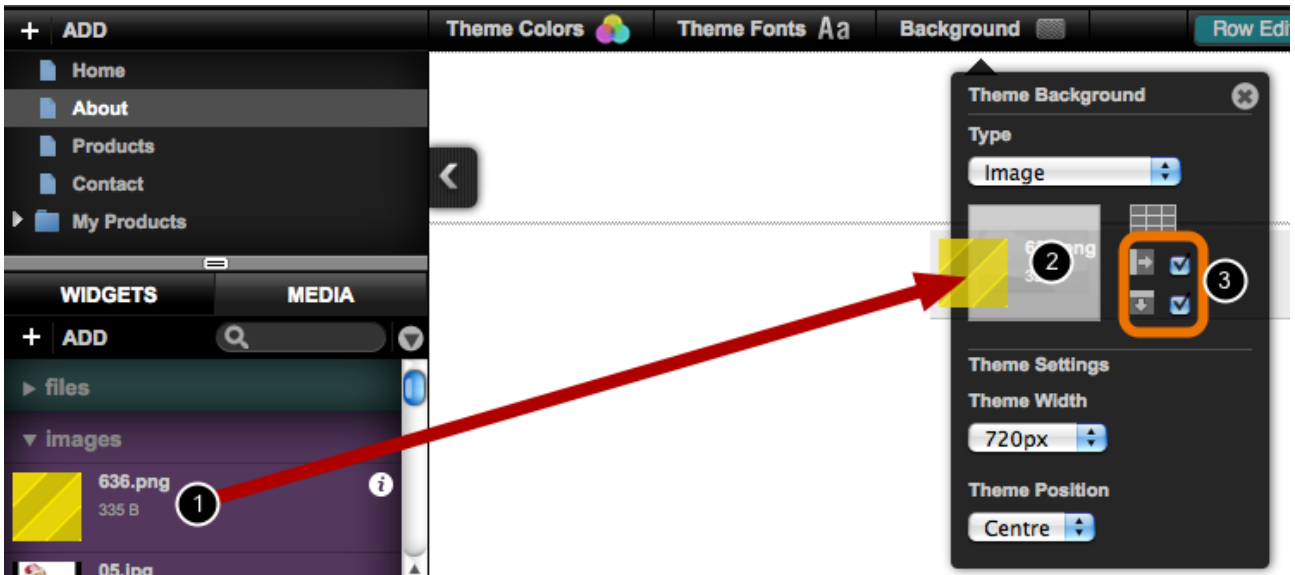

A color swatch is a sampling of colors. You can use the colour swatches panel to set the colours for a theme. To learn more about [Colour Swatches](#) see the guide.

Set a background pattern

To set the background texture, click the background icon (1) and set the type menu to **image (2)**.

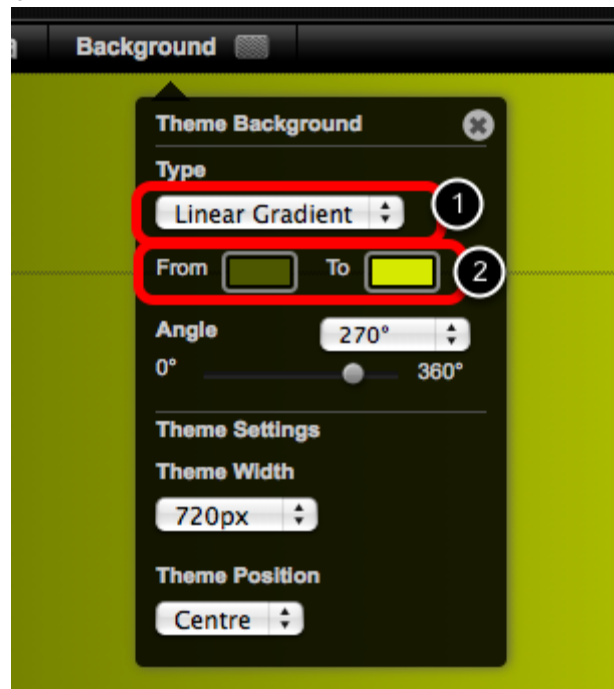

You can create a repeat pattern easily using a tool like <http://bgpatterns.com/>

Drag a pattern from the **images** tab (1) to the **image** target (2). If you want the image to repeat, tick the boxes for **horizontal** or **vertical** repeat (3).

HINT: It's best to avoid using large images in the background - they can make your site very slow to load.

Background gradient

To set a gradient, set the type menu to **Linear Gradient** (1) and then select two different colour from the **colour chips** (2)
